UNE SALLE D'OPÉRATIONS EN L'AN 2000

(Extrait de *Médecins et Clients.*)

Introduction

- 1980: « Radical surgery for prostatic cancer », PC Walsh
- 2019 : 1300 robots en France ...

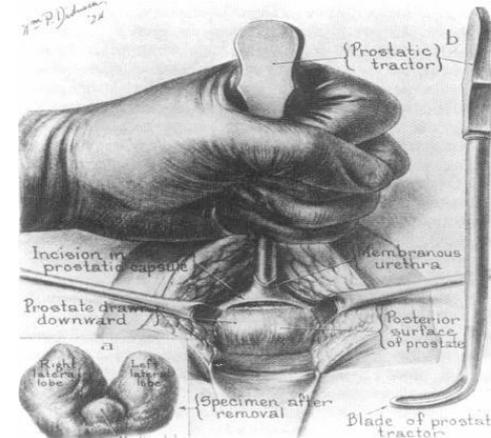

Tableau 1. Estimation du nombre d'actes réalisés pour la vésiculoprostatectomie par an en France et 2014

	2008	2009	2010	2011	2012	2013	2014*
Vésiculoprostatectomie totale par laparotomie	14 643	13 412	11 550	10 854	8 407	7 075	2 410
Vésiculoprostatectomie totale par cœlioscopie	94 37	10 140	10 485	12 646	11 357	10 732	4 010
Dont vésiculoprostatectomie assistée par robot chirurgical**	1 500	2 238	3 608	5 727	6 299	6 055	2 294
TOTAL	24 080	23 552	22 035	23 500	19 764	17 807	6 420

*Pour l'année 2014, activité de janvier à avril

Evolution des robots

- DaVinci

- Arrivée des autres systèmes ...

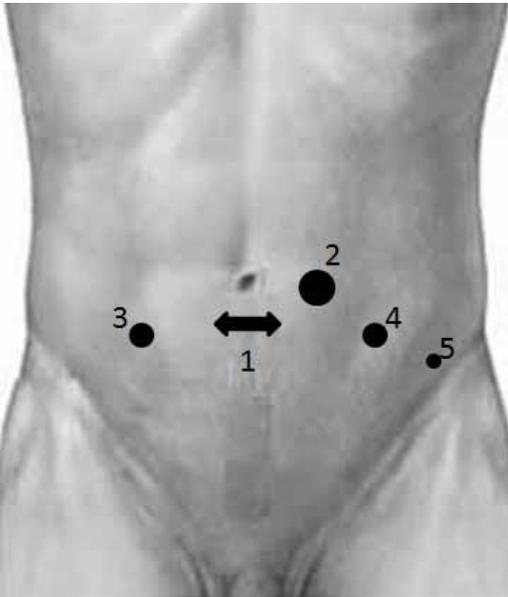

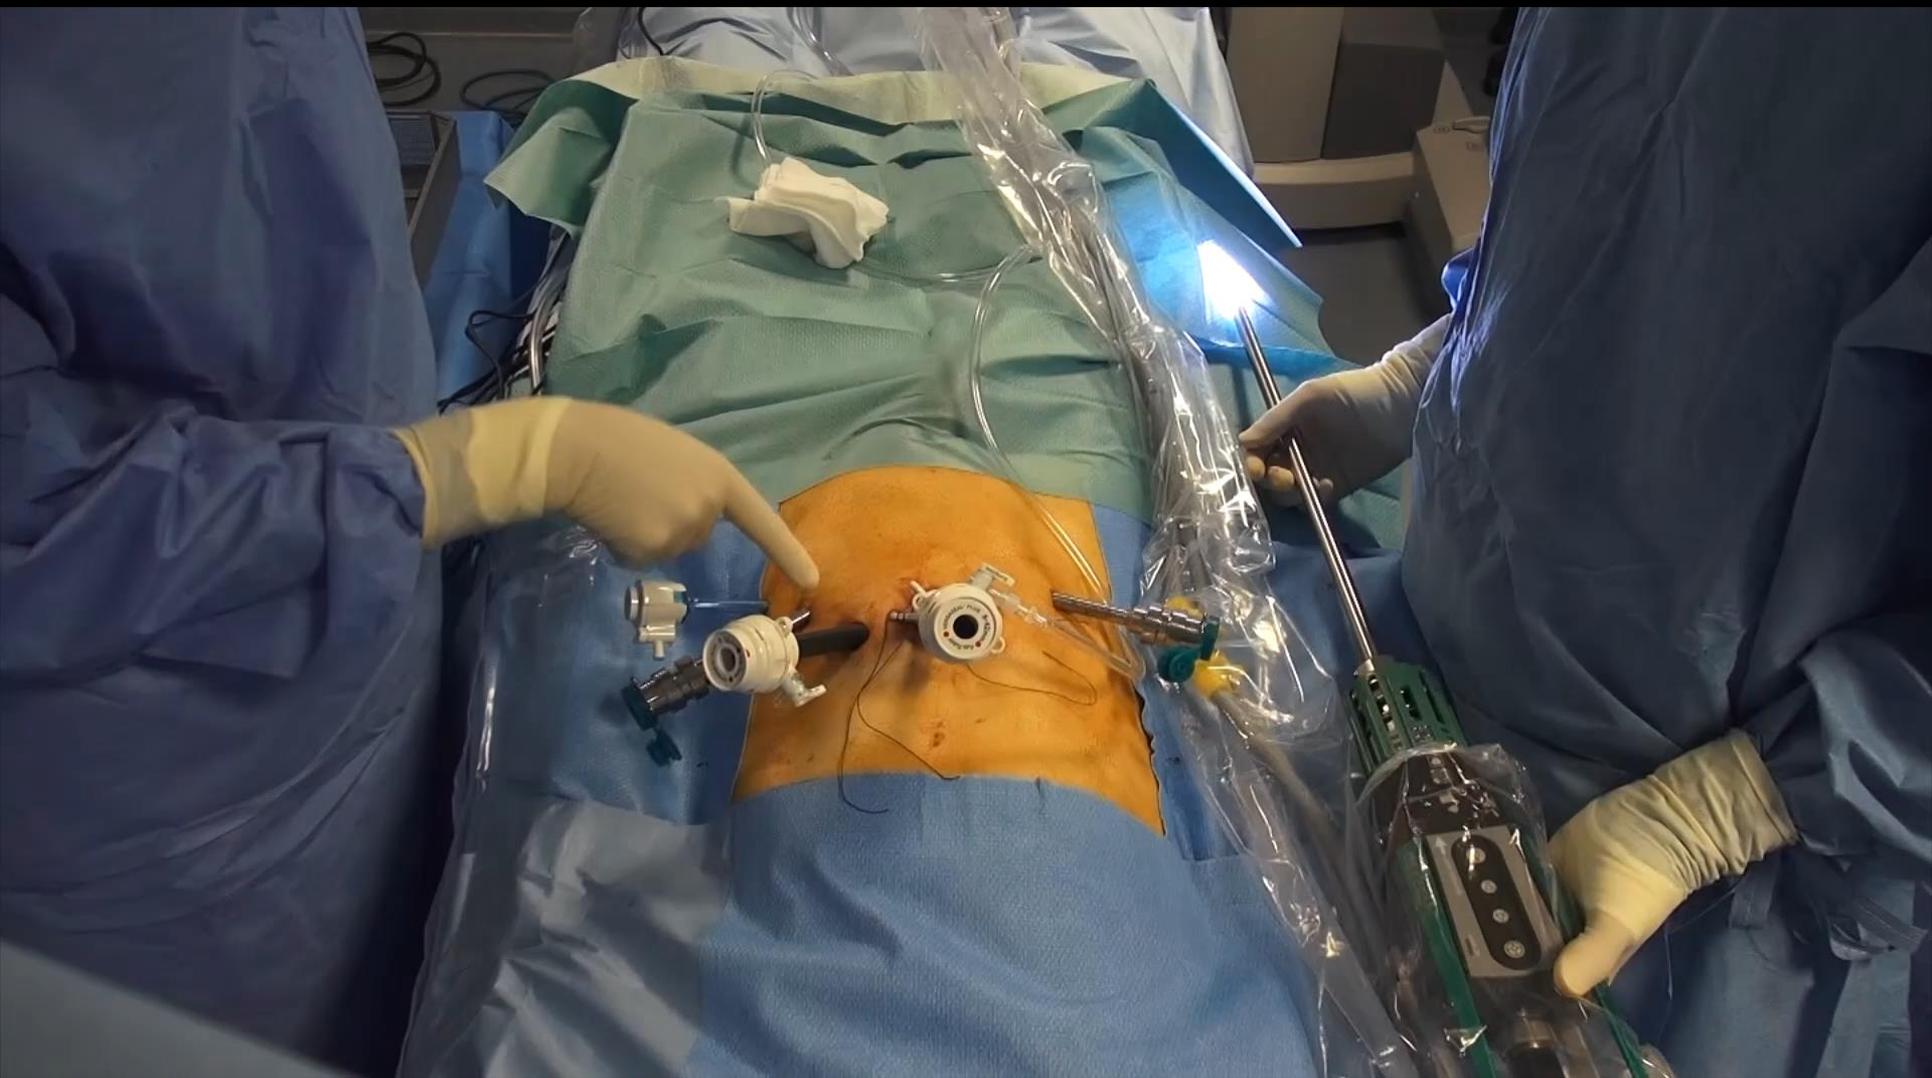

Avantages / Inconvénients

- En plus
 - Ergonomie / 3D / Mini invasif
 - Perte de sang limitée
 - Durée d'hospitalisation réduite / ambulatoire (61/19 163 en 2017)
 - Contrôle carcinologique équivalent
 - Retour plus rapide de la continence / érections (?)
- En moins
 - Cout
 - Expérience
 - Pas de retour de force

Technique opératoire

Position trocarts

Et demain ?

Prometheus : robot chirurgical autonome

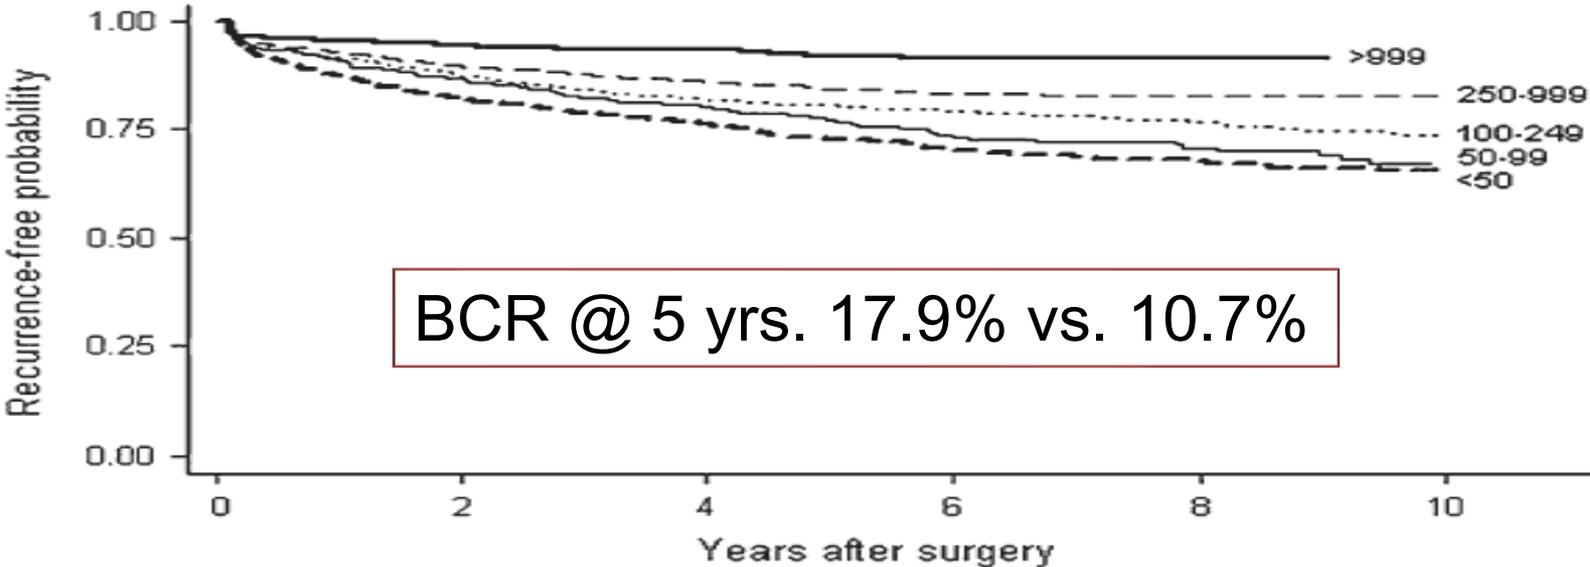

Le plus important : Qui vous opère ?

ARTICLE

The Surgical Learning Curve for Prostate Cancer Control After Radical Prostatectomy

Andrew J. Vickers, Fernando J. Bianco, Angel M. Serio, James A. Eastham, Deborah Schrag, Eric A. Klein, Alwyn M. Reuther, Michael W. Kattan, J. Edson Pontes, Peter T. Scardino

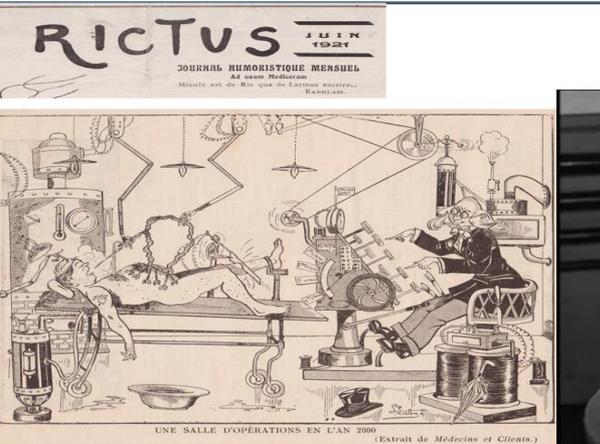

Number at risk:

—	1152	639	319	79	5	0
- - -	2940	2101	1381	836	407	146
.....	1575	1175	766	562	420	215
- · - · -	696	437	279	157	89	63
- - - - -	1402	896	644	416	254	123

Que dire aux patients ?

- Les résultats dépendent avant tout
 - du cancer à traiter +++
 - du chirurgien +++
- Dans ces centres experts, le robot
 - Même taux de guérison que les autres techniques
 - Durée de séjour plus faible
 - Moins de transfusion - Moins de douleurs post op
 - Récupération plus rapide des érections et de la continence

CONCLUSION

- Nothing can stop progress... it stops by itself
(dixit Alexandre Vialatte)
 - Dedicated team
 - Hospital
 - High cost technology
- Technology in progress...

Conclusion

- Indication
- Sélection des patients
- Acte chirurgical dépendant du stade
- Place du curage surtout étendu
- Discussion en RCP des traitements adjuvants

Questions?

**Robot-assisted laparoscopic prostatectomy versus open radical
retropubic prostatectomy: early outcomes from a randomised
controlled phase 3 study
John W Yaxley et al, The Lancet 2016**

Methods

- Phase 3 randomised controlled trial
- 1:1 randomisation
- Pathologist blinded for specimen review
- Study investigators blinded for data analysis

Open

- Single surgeon
- 15 years experience
- 1500 procedures pre-trial
- 2000 procedures end of trial

Robot

- Single surgeon
- 2 year experience
- 200 procedures pre-trial
- 1000 procedures end of trial

	Total (n=308)	Radical retropubic prostatectomy (n=151)	Robot-assisted laparoscopic prostatectomy (n=157)	p value

Pannes et Accidents

Pannes

- Mondor
 - 2001-2015 : 4 pannes sur 3000 procédures
 - Aucun risque pour le patient.
 - Pb de caméra (2), bras (2)
- Zorn et al J Endol 2007
 - 4 cas sur 725 soit 0,55%
- Kim et al Urology 2009
 - 1797 procédures : 2,4% de panne
- Andonian et al Can J Urol 2008
 - FDA MAUDE datanase : 50 000 procédures
 - 168 dysfonctionnements soit 0,33%
 - Blessure du patient : 4,8%
